

Brainstorming & Idea Prioritization

Date	26 June 2026
Team ID	
Project Name	A comprehensive measure of well being
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Chikali Sarika	Build a regression model to predict the exact HDI score and classify countries into Very High, High, Medium, and Low development tiers using life expectancy, education, and GNI indicators.	Machine Learning Model	1
2	Anusha Gollapalli	Train and compare multiple classification algorithms (Logistic Regression, Decision Tree, Random Forest) using Scikit-learn to predict a country's HDI category.	Machine Learning Model	1
3	Karishma Sharon Kaparapu	Develop a Flask-based web application where users enter life expectancy, mean/expected years of schooling, and GNI per capita to get an instant HDI prediction.	Web Application & Deployment	2

Brainstorming & Idea Prioritization

4	Ambika Chitikela	Perform exploratory data analysis using Pandas, NumPy, Matplotlib, and Seaborn to study correlations between life expectancy, education, income, and HDI.	Data Analysis & Visualization	3
5	Parneeth Devanaboina	Clean and preprocess the HDI dataset (handle missing values, scale features with NumPy and Pandas) and evaluate model performance using accuracy, precision, and recall.	Data Preprocessing & Model Evaluation	2
6	Anusha Gollapalli	Build an interactive dashboard comparing HDI predictions across multiple countries to help policymakers identify development gaps.	Application Feature	3

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Train and compare classification models (Logistic Regression, Decision Tree, Random Forest) using Scikit-learn to predict a country's HDI tier (Very	High	High	1	Yes

Brainstorming & Idea Prioritization

	High/High/Medium/Low) from life expectancy, education, and GNI per capita.				
2	Preprocess the dataset with Pandas and NumPy, then deploy the trained ML model through a Flask web application for real-time HDI prediction based on user-entered indicators.	High	High	2	Yes
3	Perform exploratory data analysis and build Matplotlib/Seaborn visualizations and a comparison dashboard to highlight development gaps across countries.	Medium	Medium	3	Yes
