Team ID	
Project Name	A comprehensive measure of well being
Maximum Marks	4 Marks

Empathy Map

SAYS		THINKS
• “I need to know how our country compares globally in overall human development.” • “Our income and life expectancy numbers look fine, but I'm not sure what HDI tier that puts us in.” • “We need reliable, data-backed numbers to justify budget allocation for health and education.”	PERSONA NAME <i>Policy Analyst (Government / Policymaking User)</i>	• Is our current combination of health, education, and income enough to move up a development tier? • Manually comparing indicators across dozens of countries is slow and prone to error. • A predictive model could help forecast our HDI standing as indicators improve over time.
DOES		FEELS
• Collects life expectancy, schooling, and GNI per capita data from government and international sources. • Manually cross-references country statistics against UNDP HDI reports to benchmark progress. • Presents development indicators and comparisons to senior officials to support funding decisions.		• Frustrated by the time-consuming, manual process of comparing development indicators. • Anxious about making high-stakes policy decisions without a clear, data-driven prediction. • Hopeful that an automated HDI prediction tool would speed up and improve decision-making.
